Subject: Anticipated Date of Salvage Operations

Good Afternoon Gentlemen,

I apologize for copying everyone but based on previous questions I have been referred to one of you three so I thought I would include each of you on this email. I apologize if this causes confusion.

Last we spoke, Statoil and Halliburton were awaiting sample results to determine proper training requirements for workers conducting the salvage work. I am just checking to see if the results are in and whether a start date has been set or if there is an anticipated start date. I am working on scheduling not only for myself but for anyone I might have conduct oversight of this work. In addition, I realize it may be too soon to know but is there an estimated time for completion of the salvage work. I have heard widely varying timelines and wondering if there is a timeline I can use for planning purposes.

Lastly, Glen Anthony had indicated that all the components installed on 7H had been located. I apologize if I missed it in previous emails but has all this been consolidated in one location and if not can I get the location(s) for each of the items?

Thank you all for your assistance.

Sincerely,

JJ Justice
